Phil McCavity says, "Just floss 'em!"

WHAT WE LIKE TO DO ON A FIRST VISIT:

We like to take a medical history so that we are prepared and better able to serve your specific needs.

A complete and thorough dental examination including the gums, tongue, cheeks, muscles of mastication and the joints connecting the jaw to the head is essential. This takes time, and we charge a small fee for it.

We like a complete set of dental x-rays, we use digital image capturing software which gives us a picture a hundred time bigger than regular phot emulsion film at one tenth of the x-ray dosage. We now prefer this type of x-ray over all others. They allow us to magnify and focus in on target areas with ease, and the data gathered can be sent accurately by e-mail to any address we wish.

We like the teeth clean and the gum pockets measured so we can really assess how well the teeth are supported. It is sometime hard to see the teeth properly when they are not professionally cleaned.

We like to take photographs of our patients so that we can recall more clearly what their treatment needs are when the time comes to design a treatment plan for them.

We like to design a treatment plan especially for you so that you know where to focus your attention to preserve your teeth and gum tissue for the rest of your life if possible.

In short we want to give you a Biting Chance at Life.
